

R7572030 **PRO-TUFF** by **ROSE Australia**

- Manufactured from impact, corrosion and UV resistant glass reinforced polyester compound
- 3 - Way bottom entry Connection Box for control and lighting applications
- Tough Screw Lid for easy Installation
- Screw Lid designed for screwdriver shank or mild steel bar, readily available to be used as locking key for easy installation and maintenance
- Intergraded metal cable entries
- Internal Earth Continuity
- IP66 Ingress Protection
- Warranty of 12 months
- Designed in Australia

The basis for utilising the ROSE Junction Box are as below :

- 1.** It is manufactured in Black GRP which has greater UV protection (because of the added carbon material that gives it it's colour) than the standard grey material. Black GRP is also stronger as it contains 22% glass material as opposed to 17% in the grey. The greater UV protection is going to provide a longer expected lifespan particularly in areas of high exposure to the sun.
- 2.** The higher carbon content of the box reduces the build-up of static electricity in the box;
- 3.** Specialized Tools are not required to open and close the enclosure. Screwdriver shank can be used or improvise with a flat bar.
- 4.** The terminals sit proud of the base. This is particularly important when re-entering the box for maintenance/repair purposes as the terminal entries are not situated below the lip of the base making it more difficult for access (as compared to enclosures where the terminals sit below the lip of the base).
